

For Immediate Release

InDepth Technology shows Time2Trac Mobile, a Professional Time Tracking System for the Microsoft .NET Platform

Mobility is the key to this professional time tracking system

New Orleans, Louisiana — April 10, 2002 — Ask any mobile professional how they track billable time and you are sure to hear about some combination of scraps of paper, notes to self, or other mental chicanery. Time2Trac Mobile solves this problem by providing mobile entry and access of time data using a PDA, smart phone, or other smart-device. Time2Trac Mobile is built using the advanced capabilities of the Microsoft .NET Framework and Microsoft SQL Server, so even mobile professionals can enjoy enterprise-class security and reliability for their time data. Accountants, attorneys, consultants, medical doctors and other mobile professionals are sure to find value in Time2Trac Mobile.

“We believe that tracking billable time is a significant challenge for a growing mobile professional workforce,” said Kevin Schuler, president of InDepth Technology. “Previous solutions have relied on complex synchronization schemes that increase your workload.”

“Time2Trac Mobile is a one-step solution, allowing you to connect remotely to a Microsoft SQL Server database using a mobile device such as a PDA or mobile phone,” said Schuler. The result is increased productivity and up-to-the-minute time data. Additionally, managers will benefit from Time2Trac Mobile’s remote time sheet approval feature.

When spending the day in the office, Time2Trac Mobile provides one-click time entry from your Windows TaskBar. You track time precisely and effortlessly. What's more, project managers will appreciate Time2Trac Mobile's ability to integrate with Microsoft Project.

"Time2Trac Mobile provides a valuable solution," said Mike Culver, group program manager for the Developer and Platform Evangelism Division at Microsoft Corp. "Microsoft is excited to be working with InDepth Technology to offer customers an exciting new solution to enable business with the Microsoft .NET platform."
